1. Executive Summary

This report provides the description of the adopted methodologies and the results at month 8 of Task 1.2 - Collection of contents, tools, databases, platforms and good practices.

The resulting collection shows the available contents and materials for the awareness-raising, communication, and education activities, addressing various stakeholders in the European Bioeconomy.

The collected tools can be exploited and maximised through the other tasks of the WP1, i.e. the creation of the awareness, communication, and education toolkits (T1.3) and the Transition2BIO resources Library (T1.4). The Library will gather and deliver the tools to the public, while selected tools will be used for the production of the toolkits.

Results on the current collection are summarised in the document, providing some information on the tools. The most remarkable finding is the interest of the main actors developing contents and tools predominantly in the MULTIPLIERS and the SUPPORTIVE ENVIRONMENT, as most of the tools addressed this target group. It is also evident the need to pay more attention to the communication needs of their audiences and stakeholders in relation to the formats in which the information is channelled to them, such as in terms of available languages and formats.

A plan for the future development of the collection is outlined in this deliverable, pointing out methodologies to enrich the collection with additional tools and information. A better description and characterisation of the tools will provide insights for the exploitation of the tools and recommendations for their use.

2. Introduction and objective

The transition towards a sustainable bioeconomy can lead to positive environmental and socio-economic impacts. Making people aware of this potential and providing the needed skills in the bioeconomy are key challenges for change (European Commission, 2018).

The Transition2BIO project will build upon the most relevant communication and education EU-funded projects and initiatives to contribute to the implementation of the Updated 2018 EU Bioeconomy Strategy (European Commission, 2018), and promote the transition towards a more sustainable production, consumption, and lifestyle by implementing an integrated package of activities addressing a wide range of target stakeholders, namely: DEMAND SIDE (consumers, citizens, B2B, public procurers, etc.); SUPPLY SIDE (primary production, production industries, biorefineries, etc.); MULTIPLIERS and SUPPORTIVE ENVIRONMENT (citizens' organisations, NGOs and other associations, brands, retailers, teachers, EU-funded projects and initiatives, influencers, media, policy makers, regional authorities, initiatives, networks, clusters, etc.).

Among the strategic objectives of the project, Transition2BIO aims to valorise and exploit sectoral communication tools and activities developed at national, regional, and local level by EU-funded bioeconomy projects and other relevant initiatives (SO1). This is also the general objective of the WP1 for the creation of the awareness-raising, communication, and education toolkits.

The target beneficiaries' needs, interests and motivations for these activities are pointed out in the Deliverable 1.1 - Conceptual framework of the awareness, communication and education toolkits – 1st version.

In particular, the task 1.2 sets out to collect and analyse, exploit and maximize the available awareness, communication and education materials and tools (i.e. presentations, articles, publications, policy briefs, case studies, good practices, fact sheets, infographics, games, quizzes, videos, info educational and training materials), as well as the existing knowledge about the bioeconomy at large and the environmental and socio-economic benefits of all bioeconomy areas, from at least 100 different sources. In the context of this report, the term source means the project or initiative from which a tool was collected.

The collected materials will be used in the project for the production of the toolkits (T1.3), and delivered in a transparent, readily available, user-friendly, and visual-attractive way through the Transition2BIO resources Library (T1.4).

This deliverable D1.3 reports the methodology (Section 3) and results (Section 4) of the collection (T1.2), as well as its limitations, and possible interpretations and implications (Section 5 *Discussion*). The conclusions are outlined in the Section 6.

In section 5, the intents for the future development of the T1.2 are also outlined.

The integral collection of the materials is provided in the Annex section.

3. Methodology

Relying on previous experiences of the Transition2BIO consortium, the project envisaged selecting the sources for the collection of materials from the following types of EU-funded projects and initiatives:

- EU funded projects in bioeconomy awareness and communication (e.g., BIOWAYS, BioSTEP, BioCannDo, BIOVOICES, BIOBRIDGES, BLOOM, LIFT) in different programmes (H2020, Interreg, Erasmus+, etc.).
- Other relevant EU-funded projects dealing with the Bioeconomy at large in different programmes (H2020, Interreg, Erasmus+, etc.).
- European Commission (EC)'s initiatives and platforms (e.g., Knowledge Centre for Bioeconomy (JRC), European Circular Economy Stakeholder Platform, European Rural Development Network, FIT4FOOD2030, etc.).

This work should have built upon:

- LIFT's European Bioeconomy Library¹, managed by FVA and LOBA, which collects and delivers in a structured way the main outcomes of many bioeconomy projects (mainly CSAs or CSA-like in H2020, Interreg, Erasmus+ and other programmes).
- Knowledge Centre for Bioeconomy, managed by JRC, mainly targeting policymakers.
- The exploitable awareness and communication assets from BIOVOICES, BLOOM, BIOWAYS, BioSTEP, Biobridges, LIFT, SHERPA, BE-Rural, NEXTFOOD, BoostEdu, Transition to Green Economy, XPRESS, European Bioeconomy University, where partners are involved.

To ensure the achievement of the target of at least 100 EU-funded bioeconomy projects, networks and initiatives, the risk-mitigation measures of the project proposed that Transition2BIO analysis should have been based, as a starting point, on the LIFT's European Bioeconomy Library. Additionally, initiatives like the European Bioeconomy Network (EuBioNet) and the European Bioeconomy University (EBU) have been analysed.

Following these indications, the sources were identified among the projects collected by the European Bioeconomy Library, the European Bioeconomy Network's projects and initiatives partners, the European Bioeconomy University's projects, and from the European Commission's initiatives, like the Joint Research Centre and Knowledge Centre for Bioeconomy.

¹ <https://www.bioeconomy-library.eu>

From each source, the available tools were identified and collected in a database shared with the project's consortium.

Resources not related to awareness-raising, communication, and education activities in the European Bioeconomy were excluded from the collection. Materials that were not accessible and freely available were excluded as well. Alternatively, tools that required a free registration on a web platform were considered.

Contents related only to the dissemination and communication of the sources' scopes and methodologies were not collected.

The year of publication and the language of the tools were not chosen as eligibility criteria for the collection, not setting time or linguistic limitations.

For each tool, the following descriptors were identified and pointed out in the database:

- Language(s)
- Title of the tool
- Content type
- Target group
- Source
- Year of publication
- Link to the tool

The classification of the tools for the “content type” descriptor followed the content type categories of the LIFT European Bioeconomy Library.

4. Results

A total of 926 tools were collected from 97 different sources (Table 1). The tools target mainly (and by large) MULTIPLIERS and SUPPORTIVE ENVIRONMENT (746 tools), while less attention is given to the DEMAND SIDE (64) and SUPPLY SIDE (98) (Fig. 1).

Figure 1. Distribution of tools by target groups.

The tools were classified as 'Multiple target groups' (19 tools) when it was not possible to identify only a single type of target group for them. This does not imply that other tools may

not have been targeted or not be appropriate to more than one target groups. Even for the 'Multiple target groups' tools, the addressed target groups have been indicated. In the Annex, it is possible to see specifically the target groups identified for each tool.

Most of the collected tools are in English (Fig. 2), but the tools available in other languages show a large linguistic diversity including a total of 23 languages: Bulgarian (19 tools), Chinese (1), Danish (1), Dutch (8), Estonian (1), German (20), Greek (3), English (770), Finnish (4), French (10), Hungarian (1), Italian (13), Latvian (15), Lithuanian (1), Macedonian (17), Norwegian (4), Polish (20), Portuguese (3), Romanian (18), Slovak (1), Slovenian (6), Spanish (8), Swedish (2).

Figure 2. Number of tools for each language.

The tools were also classified according to the type of content. The "Content type" categories of the European Bioeconomy Library were used²: Article, Case Study, Database or repository, Fact Sheet³, Games, Good practice, Infographics³, Multimedia/video, Platform, Policy Brief,

² "Network/cluster/initiative" category was not considered.

³ "Fact Sheet" and "Infographics" were considered as two different categories, unlike what has been done in the European Bioeconomy Library.

Presentation, Project deliverable, Project progress/final report, Publication, Recommendation, Training material, Other.

Figure 3. Number of tools for each content type.

Project deliverable (223 tools) and Presentation (131) are the most frequent content types (Fig. 3), while Article (9), Infographics (7), and Project progress/final report (3) are the less frequent ones.

5. Discussion

5.1 Main outcomes

The analysis of the collected tools mainly suggests unbalanced attention of the main actors developing contents and tools in the European Bioeconomy for those who may amplify their messages, instead of focusing on their end targets. These targets may be justified by the early stage of development of the sector; however, this may need attention and, potentially, a change of strategy for the future.

The frequencies of the content types are consistent with this view, since the ‘more immediate to understand’ tools (like, for example, the Infographics and Games) are less frequent than those for bioeconomy experts, like the Project deliverables and Publications.

English predominance in the collection could be a possible limit to the usability of the tools, as even some multipliers usually enjoy materials in their native languages (DESIRE, 2013). However, the presence of tools in many other languages is interesting, showing possible concern of these actors towards the practical needs of the stakeholders and stake in the geographical spread of their materials.

The majority of the tools lacks the indication of the year of publication (data not shown). This descriptor will be analysed more accurately in the next steps of the collection (section 5.3). On the other hand, it shows an interesting aspect to be addressed by the contents’ creators, as their audiences may need to know and evaluate the currentness of a document (The University of Akron, 2021).

5.2 Limitations

This collection and the analysis of available awareness-raising, communication, and education tools in the European Bioeconomy have some limitations for the understanding of the extent of these materials and for the identification of the elements characterising the tools. Indeed, further work is needed to enlarge our research and evaluate the use of the tools.

At this stage, the research of the available tools considered mainly EU-funded projects and initiatives, and only a limited number of these have been taken into account. Materials and sources from many other institutions and stakeholders were not collected, while they could provide interesting angles and examples in the landscape of the information exchange in the European Bioeconomy.

Furthermore, for the tools, only some descriptors and the related information were considered and collected. Other descriptors and information will be needed to characterise and

understand at a deeper level the tools, also in order to provide usability- and usefulness-oriented recommendations for the use and exploitation of them.

The coverage of all bioeconomy sectors, aimed by the project, by the available tools in the European Bioeconomy have to be estimated and understood.

A detailed description on how to further develop the collection, also addressing these limitations and providing future directions for this research, has been set out in section 5.3.

5.3 Future development of the collection

This section shows the next steps for T1.2.

Firstly, it is planned to complete the collection with the methodologies outlined in section 3, as well as to enrich the collection through the suggestion of further relevant sources and materials by the consortium partners.

Other additional tools and sources will be added also through searches in specific repositories.

The repositories and the keywords for the searches still have to be identified.

The tools may come from any type of source, while their eligibility criteria will be the same as those described in section 3.

Considering the number of sources from which the materials have been already collected, it is expected to exceed the Mile Stone 1 - Collection of contents, tools, databases, platforms and good practices from at least 100 different sources.

The enriched collection will include a general characterization of the tools (with the same type of information collected for the current collection).

In the updated collection, for each tool, will be also pointed out the following additional descriptors:

- Sub-target group
- Geographical focus
- Year of publication
- Bioeconomy sector(s) focus

Afterwards, a shorter list of the tools will be selected, including only the content types we do assume to be the most interactive, or user-friendly, or worthwhile for the target groups' needs:

- Case study
- Factsheet
- Games

- Good practice
- Infographics
- Policy brief
- Training material
- Video

The selected tools will be evaluated by the consortium partners and by the members of the Advisory Board with the following criteria:

- The level of responding to the questions outlined for the objectives of the Toolkits in the Deliverable 1.1 - Conceptual framework of the awareness, communication and education toolkits – 1st version
 - For tools targeting the DEMAND SIDE: *What is bioeconomy? What are the bioeconomy areas? What are the benefits and impacts for the society, the environment and the economy? What is the contribution of the demand side in driving the transition towards a more sustainable consumption and lifestyle?*
 - For tools targeting the SUPPLY SIDE: *What is bioeconomy? What are the bioeconomy areas? What are the opportunities for my sector? What are promising regional business models? How can I valorise my residues? What is the contribution of the supply side in driving the transition towards a more sustainable production? What are possible financial opportunities for bioeconomy sectors?*
 - For tools targeting the MULTIPLIERS and the SUPPORTIVE ENVIRONMENT: *How to communicate and support bioeconomy?*
- The comprehensibility of the language (textual and visual)
- The ease of use

These steps will provide a thorough characterisation of the selected tools and recommendations on how to foster the exploitation of the available and most useful tools for awareness-raising, communication, and education activities in the European Bioeconomy.

The rationale of this section was partly inspired by POWER4BIO (2019).

6. Conclusions

This collection provides us with a basic but informative picture of the materials disseminated in the European Bioeconomy regarding awareness-raising, communication, and education activities.

From the analysis of these tools, it is advisable for EU-funded projects and initiatives to pay greater attention to the communication needs of their audiences. They should consider and address their linguistic needs and design easily accessible and understandable dissemination materials on their data, results, and evidence.

The future enrichment of the collection with additional tools and descriptors, following the steps outlined in section 5.3, will allow a deeper understanding of the extent of the information exchange materials in the European Bioeconomy. At the same time, it will make us comprehend usability- and usefulness-related information about the tools.

The results of the future development of the collection will be discussed in the D1.4 – Report on Collection of existing contents, tools and good practices – update on month 23.

The collection will be publicly delivered in a transparent, readily available, user-friendly, and visual-attractive way through the Transition2BIO resources Library (T1.4).

A selection of the collected tools will be used in the project for the production of the toolkits (T1.3), as well as for other activities.
